- Get to know selected track information
- Edit and delete song
- Add songs to a playlist
- Sound settings

Q: JavaScript / jQuery -- can I declare the size of a table before the page loads? I'm working on a page that dynamically builds an HTML table. I'd like to display the table, but use a modal dialog to let the user view the details before creating the table. I'd like to use jquery to display the table, since my CSS can be written once and used to style the table across a few pages. I'd also like the table to be relatively "narrow," because the user might not have a large enough monitor to see the whole table. When the user clicks to view the table, I'd like the table to expand to the appropriate size so that it will fit on the screen. I've set up a simple jsfiddle to illustrate what I'm talking about. Here is the HTML for the dialog: Name Age Birthdate dick 26 3/17/1969

What's New in the JMP3Player?

If you need to play a couple of audio files to test the sound, JMP3Player is the tool you're looking for. It's a simple audio player with a large collection of features. Find it at the official site at: [JMP3Player](#) is available for Windows platform. Description: Lightweight and easy to use, JMP3Player is an audio player with a simple interface. No visual changes are applied to the user interface. Drag and drop features are offered, while seeking is possible, too. The application supports multiple audio formats, and playback consists of simple, clean, one-file-at-a-time playback. Description: Tons of alternatives are available over the web, and JMP3Player is a suitable example, fitted with a simple set of controls. What's more, you do need to make sure that Java Runtime Environment is on the computer you want to use it on if you decide to carry the program around on a thumb drive. Description: Lightweight and easy to use, you can go ahead and check out the application's set of features from the moment download is done, because you're not taken through a setup process first. However, you do need to make sure that Java Runtime Environment is on the computer you want to use it on if you decide to carry the program around on a thumb drive. Description: JMP3Player is a lightweight, easy-to-use audio player for Windows. It's suitable for playback of audio files. No media player is bundled with the application, and therefore you can't expect to find too many features. For example, playback is only one-file-at-a-time. There's also no playlist editor to save more files for a lengthy playback session, even though you can load playlists. JMP3Player does support multiple audio formats, and playback consists of clean, one-file-at-a-time playback. Description: To end with Bottom line is that simple playback of audio files doesn't really need to be accompanied by advanced features. JMP3Player does offer a straightforward approach, with minimum impact on the target PC. Sadly, the lack of a playlist manager delivers a considerable impact to practicality, which isn't quite fit for an everyday audio player. Description: Lightweight and easy to use, JMP3Player is an audio player with a simple interface. No visual changes are applied to the user interface. Drag and drop features are offered, while seeking is possible, too. The application supports multiple audio formats, and playback consists of simple, clean, one-file-at
