In this page, you will find answers to all the above questions. Who developed AutoCAD? AutoCAD is developed by Autodesk, a company that was founded in 1952 in Oregon. Initially, it was called the “Gracernote Company” and became the “AutoCAD Company” in 1994. As of 2017, it has more than 6,000 employees in 66 countries and is a business unit of the Autodesk. It is headquartered in San Rafael, CA and has an office in Japan, as well. In AutoCAD, you will find dozens of complex features, such as sophisticated drawing creation and editing tools, rigid body physics, CAD-based BIM modeling, and CAE (Computer-Aided Engineering). You can check out a complete list of the features and their descriptions here. AutoCAD was first designed for microcomputers with graphics controllers and desktop-like interface. From the beginning, it was meant to compete with desktop publishing applications like Adobe PostScript and Adobe Draw, which enabled users to create, edit, and print documents. In order to stand out from the competition, Autodesk focused on creating a fast and efficient CAD tool. It is not like the other desktop-style CAD applications, in which each user has to design or edit documents in separate graphical windows. You can edit documents in a single window and use a single set of commands to perform multiple tasks. AutoCAD's main screen. Click to see full-size. In 1980, Autodesk won an important contract with the US military to design and build an integrated CAD application. The company initially called it CAD-2000 and later renamed it to AutoCAD. After that, the company won contracts from other major corporations. Autodesk is now the largest provider of CAD software solutions. Most people use AutoCAD for two reasons: Creating and editing documents. The majority of AutoCAD users are architects, engineers, designers, drafters, and contractors. They
