The program was originally a spinoff of AutoDesk, a wholly owned subsidiary of Autodesk, Inc., based in San Rafael, California. At its peak, it had over 3.2 million users in 1998, which was 50% of the professional market.[1] AutoCAD was originally intended for use by architects and engineers, and was not intended to directly compete with other CAD programs. In 1998, the company was purchased by San Rafael, California-based software company Autodesk for $2.4 billion, doubling the company's annual revenue, which had been $400 million at the time.[2] After the acquisition, the CEO of Autodesk, Don Snyder, was named CEO and chairman of the board of Autodesk and released AutoCAD under a new, joint licensing model with additional premium features that were previously only available to Autodesk customers.[3] In 2006, the company launched AutoCAD LT, a less powerful, freeware predecessor to AutoCAD. In 2010, the company released a new more powerful AutoCAD LT 2015. AutoCAD 2010 is the latest version of the software. AutoCAD, which was first introduced in 1982, is also available in a stand-alone web app. In 2015, AutoCAD LT 2015 was discontinued and replaced by AutoCAD 2016. It also became freeware. AutoCAD 2016 is the latest version of the software. The software was developed by a different team of Autodesk employees than the team that developed AutoCAD 2015, including Autodesk employees who used it at home.[4] The success of AutoCAD and other similar products like Dassault Systemes' CATIA and Microstation, all of which are suites of several CAD-related applications, has led to the development of other, more specialized CAD programs, like Inventor by Dassault Systemes and Vectorworks by Vectorworks. History [edit] Precursor [edit] AutoDesk's predecessor, Autodesk, Inc. (originally called Data Design), was formed by computer engineer Ben Shneiderman on January 3, 1974.[5] In the summer of 1974, Autodesk created the AutoLISP language on the DEC PDP-10 to run on a personal computer. The language was inspired by the author's job as a draftsman. However, there were few applications written in AutoLISP and the

I have a bean that gets a list of objects from an external system that do not implement a standard interface, so the only way to access them is through the getters. What I need to do is make a separate bean that will hold the selected object and update it, so when I get the list of values from the external system, I only need to access the one that is selected. Is there a way to do this? A: public interface MyBean { String getProperty1();

String getProperty2(); } public class MyBeanImpl implements MyBean { private String property1; private String property2; public String getProperty1() { return property1; } public void setProperty1(String property1) { this.property1 = property1; } public String getProperty2() { return property2; } public void setProperty2(String property2) { this.property2 = property2; ca3bfb1094

Make sure that your operating system is 32-bit or 64-bit and you are logged in as administrator. If it is 64-bit and you are logged in as normal user, you will get the error "Out Of Range" when you open the file "Setup.exe". If you click on Continue button, your system will hang. You have to install Autocad as administrator. Close Autocad. Open the Autocad.exe. Open the menu bar and click on "File" and "Exit". Enter key code and your activation will be installed. Source A: You can also download Autocad from here and use the activation. Q: Adding a python library to eclipse by PYDEclipse I just installed the pydev plugin for eclipse. I am new to eclipse and python so I dont know how to add new libraries to the python. I installed a python library and it works in the command line, but how do I add this to my eclipse project? Do I add it manually? or is there a way to create an installation.egg? A: The instructions on the pydev site show how to do this: To add a new library to Eclipse: Open Eclipse's "Windows" menu and select "Preferences". In the "Preferences" window, click on the "PyDev" tab. Click on the "Add..." button. Enter the name of the library, i.e.: "pygobject" and click on the "Add Library..." button. If you have a package like PyGObject 2.30.3, you can click on the "Browse..." button, choose the folder where you have your library and a new window will open, where you can select which files to add. To use that library, go to "PyDev" -> "Code Assist" and select the "Use library" option. Q: Intuition for how `this` works I have been trying to understand the intuition behind how the "this" keyword works, but have not found a satisfying answer so far. I think I am on the right track, but my understanding is still too fuzzy. Let's consider an example.
