Turbo Commander is a freeware Commander class application that has been designed to simplify the management of multiple local or remote networked drives by providing two panes for monitoring the status of the selected device and two extra control panels, one per channel, to trigger action commands and transfer data from and to the drive. As it is usually in such Commander applications, Orion Crack can be programmed to use the entire monitor when it is launched and automatically moves to the specified channel when a specific scan command is issued. Whenever a device is connected or disconnected, one of the dedicated control panels will appear (connected, disconnected, or busy). A list of connected and disconnected drives will be displayed on the main panel, with the corresponding disk and volume for each channel. Concerning the two control panels that reside on each channel, they contain a set of buttons or menu items that allow you to perform actions such as increasing or decreasing the transfer rate, transfer files, take snapshots and attach volumes. Moreover, the application also provides a flash drive transfer utility, a TRASH DELETE command, an administrative management screen ([click here to view](#)), a log, a boot-up menu, and a shortcut menu, among other additional features. In addition, it is important to mention that the program gives you the possibility to setup an extended tray icon, hide the tray icon and make the program start with a specified volume or directory. Concerning the technical aspects, Orion supports various storage devices, from local drives to networked media, as well as the windows XP and Vista operating systems.
