I had originally tried to put them all in this file, but it didn't work out well. Here's my current.gitignore file: /app/api/[a-z]{3}/[A-Z]{4}/[a-z]{3}-client/ /release/ /logs/ Here are some of the resulting exceptions: /api/home/users/ /index.html /static/ /assets/.gitignore /api/local.xml The second pair of exceptions is the worst, as there are too many of them. A: As stated in that Ignoring certain files with.gitignore in git, you can, with the

Q: Cannot view Custom PDF attribute values in Crystal Reports I have inserted some Custom Attributes into a Report. Then I went to the properties of the Report object, went to the "Custom Attributes" section, selected the "Edit Custom Attributes..." button. On the 'Custom Attributes Table' I added a new attribute. I made it a String, and added a value for it. The problem is that when I run the Report, the custom attribute value does not show on the rendered PDF file.

A: The answer was actually very simple. In order to make the values of the custom attribute appear you have to choose a column where you want to display the attribute's values on the PDF.

Photo-induced interaction between manganese dioxide and humic acid. To understand the major photo-induced reactions of manganese in natural aqueous systems, the reactivity of humic acid (HA) and manganese oxides (MnO₂ and Mn₂O₃) were studied using quantum yield and decay-associated spectra measured with laser flash photolysis and time-resolved X-ray absorption spectroscopy. MnO₂ photodecays mainly via hole oxidation, while the least efficiency in Mn₂O₃ was found in the direct hole oxidation. Oxidation of MnO₂ by peroxide radical(s) was suggested to be minor contribution to MnO₂ photo-oxidation. Photo-oxidation of two Mn ions in HA was confirmed via hole oxidization. These findings suggest that humic acid possesses a highly efficient capacity of scavenging holes generated from MnO₂ photo-oxidation, which is likely to be the primary functional role of humic acid in Mn oxides cycling in the natural aquatic environment.

The specific gravity of the dirty water is determined in hundreds of ways, depending on the matrix and whether the specific gravity of the matrix is measured, or the specific gravity of the only part of the water with which the specific gravity is to be determined. In some cases, the measurement of specific gravity is combined with a chemical-measurement analysis, for example, for total dissolved material, or for water constituents. Other types of water analysis include the measurement of water-quality parameters such as pH, temperature, etc. All of these parameters, and others, may be used in the determination of a water's specific gravity. Ideally, after a water sample is taken, it should not be used, for example, for human consumption, or for washing any object. It is thus important that the specific gravity of a water sample be determined very quickly, while being minimally disturbed.

Pages Back in July, the amazing CTPDocuments.net opened up a "search" feature on their website, allowing its users to find docs related to CTPDocuments.net. Shortly after its launch, the site got a steady stream of visitors -- including government website data crawler at LocalWiki DataDog, crawling other government sites. Over the past few months, CTPDocuments.net has added another search feature, one that can be directly accessed at CTPDocuments.net/search. Anyone who has used the site can tell you that being
