Businesses use CAD software for the creation of 3D models of buildings, machinery and equipment, and other physical objects. Most people are familiar with this type of software, as many desktop and laptop computers have built-in software to create a 3D model of an object. The drawings can be used by architects, civil engineers, graphic designers, product designers, and others who would like to visualize the object before they make it. Ad AutoCAD is a versatile and powerful tool, but it has its limitations. Its use is generally limited to the creation of two-dimensional (2D) drawings. While it can be used to create other types of drawings, such as architectural blueprints and drafting templates, the quality of the resulting work is often less than that produced by other CAD applications. AutoCAD is used primarily by those engaged in architectural, engineering, and construction industries. Tip CAD, or computer-aided design, is used by architects, civil engineers, graphic designers, product designers, and others. It is used to create 2D and 3D drawings that are used to visualize the built or manufactured object. The current version of AutoCAD is 2013, released in February 2013. It has extensive capabilities, but also lacks some of the more popular features found in competing applications. AutoCAD is available for Windows, Linux, Mac OS X, and Windows Mobile platforms. The basic process of creating a drawing in AutoCAD begins with the creation of a two-dimensional (2D) drawing template. Once the drawing template is created, a two-dimensional (2D) drawing can be added to the template, which then becomes a three-dimensional (3D) model. The structure of a typical AutoCAD drawing has three sections: the drawing area, the controls, and the status bar. The drawing area contains the 2D drawing that will be produced. The controls include the following: a menu bar; a toolbar; a navigation bar; a zoom or zoomed area window; the status bar; the drawing area tools; the printer; and the Plot Area tools. The menu bar is located at the top of the drawing area. This menu contains many items, including the following: File, Options, Dimension, and History. The toolbar is found at the bottom of the drawing area. It contains the drawing area tools and a status bar. The navigation bar is a bar located on the left

Automatic numbering of edges AutoCAD's drafting table is a usable drawing area or canvas. Designing on the drafting table can be done without lifting the pen

from the drawing surface, via automatic edge numbering. Languages AutoCAD supports three languages of communication with the program: Visual LISP Visual LISP is an interpreter for a programming language called AutoLISP. The AutoLISP programs created using Visual LISP can be executed in either a graphics mode or an application mode. Graphics mode: the AutoLISP program can be executed on the screen in the graphical user interface. Application mode: the AutoLISP program can be executed in a command line, using a text editor to write code and compile it. Visual LISP is based on Visual BASIC but it is a programming language in itself. Some features of Visual BASIC are not supported, most notably recursion. Visual LISP is in fact an AutoCAD extension, allowing AutoCAD to interface with third-party software written in Visual LISP. Visual LISP has been the standard AutoCAD programming language since AutoCAD 2013, when it was replaced by Visual BASIC. Visual LISP remains available in all current versions of AutoCAD. Visual LISP is a dialect of AutoLISP. Visual LISP syntax The language is a dialect of the more general AutoLISP language, and can be extended to add new features. Unlike BASIC, Visual LISP does not have built-in commands or a loop. Instead, the programmer must use a series of functions which manipulate strings of text. There are two types of strings in Visual LISP: A single string of text A string of text containing a list of other strings Functions Functions can be separated by semicolons or colons. The return value of a function is used by the programmer to determine the result of the function. If there is no result specified, the function returns "". Example The following example is a simple function in Visual LISP. In this example, the "Hello" function returns the string "Hello". Hello () If the "Hello" function is executed by the program in an application mode, the following result will be displayed. Hello An alternate function: Hello_ af5dca3d97
