Those onboard USB-C connections are all fast, too: The ROG Mothership was architected with the fast Thunderbolt 3 protocol in mind. This cable-free approach is compatible with other systems for daisy-chaining and daisy-chaining, it just happens to allow the Mothership to operate as a fully-fledged desktop replacement as well. You're free to install any given app on the ROG Motherships 667MHz storage from any given app store, without it slowing the machine down at all. That's because you're not actually installing or running apps on the HDD. We are still able to cache apps like your music and video collections, too. That means that when you launch an app, it starts up instantly and only needs to access the local cache of its files. I also needed the room to add a second battery to both kick up the GPU boost potential further and compensate for the platform's restriction against long charge times. The second half of the Mothership can double as a workstation with a second graphics card in SLI mode. As soon as your first system runs out of juice, you can pack up your second system and keep working. When it comes to graphics, the Mothership is the logical choice for all-out performance. No other laptop on the market boasts a GeForce RTX 2080 Max-Q inside, and it's a much more capable chip even than the desktop RTX 2080 at full power. The 2080 Max-Q will output up to 4K at 60fps thanks to its Maxwell-based architecture, and it can even run games at ultra settings with no visual defects for the majority of gaming titles. It's also VR-ready thanks to VRWorks Max-Q technologies, and the live calibration tool in the BIOS will allow you to tweak its core clock speeds and memory clock speeds for optimal performance in VR games and experiences.
