
Trimble Geomatics Office Software 17

[Download](#)

the geomatics office provides a wide range of geomatics services to the geoscience and engineering departments in unb. services include technical support to geoscientists, data management support, image processing, photogrammetry, photogrammetric processing, remote sensing, gis and spatial information. over the years, the geomatics office has expanded its services to include: geological survey of canada (gsc) is a government agency that works in collaboration with the provincial and territorial geologists in canada to provide geoscience information and services to all canadians. gsc geomatics work with the broader geoscience community to develop and maintain geospatial data and services. we also work to improve the accuracy of geospatial data and services in canada. the trimble semantic cloud is a cloud-based solution that can be used to store data and create workflows. trimble semantic cloud is an open, web-based, enterprise cloud-based platform that can be utilized by a wide range of users, including engineers, surveyors, planners, gis professionals, and data analysts. the trimble universal database is a powerful relational database management system

(rdbms) that was designed from the beginning to be an intuitive, easy-to-use, application-ready data management system. the database was created to provide highly accurate, real-time positioning and location services to create seamless gps applications for nearly every type of gps device. the trimble universal database is the best option for data capture, data management, and data sharing. the trimble scheduler is a cloud-based solution that enables automation of repetitive workflows in a single location. this powerful software solution enables repeatable workflows in a single location, which is especially useful for surveying and engineering jobs that require coordinated activities between several parties. scheduling software reduces the chance of human error by ensuring that repetitive work is performed by the same people in the same place at the same time. as a result, the job is completed more efficiently and more accurately.

Trimble Geomatics Office Software 17

dr. ralph manushek is a geodesy/geomatics engineering faculty member and a post-doctoral

researcher at the university of new brunswick. he is a member of the geodesy/geomatics engineering graduate student association (g/gegs). the g/gegs (under the supervision of the student association president, jenny rempel) are currently developing an educational campaign on the importance of geodesy/geomatics, in the area of surveying and the land development industry. we recently had the pleasure of touring the city of fredericton with the mayor and members of the common council and a group from the canadian urban environment association. the tour started at the quality of life offices and then took us to the council chambers. the tour included a tour of the fleet street bridge, the royal citadel and the peace tower. the tour was highlighted by our visit to the civic centre where we were able to see the new \$4.2 million public washrooms/swimming pool. as part of the tour we visited the new \$1.8 million westmorland baths. the tour included a visit to the new fredericton public library. while the tour was being conducted by the mayor, we were able to speak with a member of the administration regarding possible recommendations for

improvements in the city of fredericton. we appreciate the time the mayor and the city of fredericton spent with us and wish them the best of luck in the upcoming election. dr. hossain is the vice-president, finance and administration of the university of new brunswick. he has worked for the unb department of geosciences for over 15 years. he received his undergraduate degree in geosciences at the university of toronto and his phd in earth sciences from the university of waterloo. he has been a canadian institute of geosciences post-doctoral fellow and participated in the international geomatics association (igu) and iugg conference in lisbon. his research interests include the areas of geophysics, geochemistry, geomatics and remote sensing. 5ec8ef588b
