In addition, Lightroom has some quite interesting features that are only available for those who have purchased the latest update. Among them are the Quick Crop tool, the Time-lapse mode, a carousel view that shows all images of the same type, and a more natural interface. In addition, in Lightroom 5, you can now use the Linked Edit function and Linked Albums. These are the most interesting and most welcome additions to the tool. All in all, Lightroom has improved a lot since the last version, with more new features. It could be a good choice for those who are using it to the best of their ability. The thing is, it still has a number of issues and some problems that it hasn't worked out yet. When you open a catalog in Lightroom 5, the interface remains unchanged. So if you're already familiar with Lightroom 2, you will feel less-than-excited about the interface. The new colors are pleasing, but when you compare it with ACR, it's still nowhere close to it. It's strange that Photoshop and Lightroom are still using this dull monochromatic color scheme. As you might expect, the new release suffers in one area: The font selection functionality is awkward at best. And, with the introduction of the absolute must-have feature, Adobe has now caused users to lose their color settings even in their documents under which the color preset is saved on a user-by-user basis. On top of that, this would be a great time for Adobe to refresh Photoshop to further improve the look of straight-forward artwork. We are now on Photoshop version 2019.5 and not even the "VB" moniker is available. This upgrade is desperately overdue.
