Simple TCP Listener Crack [Mac/Win]

* Simple TCP Listener is not designed to be resourceful. It merely supplies a portable interface to define and start a port listening service. It is very simple and it is not meant to supply error handling or other advanced functionality. It is a one-file application only. No windows are displayed, no tray items, no execcom files, no menu shortcuts and no registry entries. * All services are started in the background by default, i.e. they run even if the computer is idle and no windows are displayed. * The executable file is compressed by default, which significantly reduces the size. * There are no options in the interface, and the application does not display any message box or buttons. * The application only reads port numbers from text files and starts listening to incoming TCP connections. * You can define how long the service will run. * The service does not start automatically. It only uses an application context and can be started manually. * The application does not create Windows registry entries. What's New: Version 5.0.0: * Added an option to close listening ports after they are opened. * Added an option to hide the taskbar icon. * Added an option to automatically start the service when the system is booted. * Added a help file. What's New in Version 4.2.1: * Removed the option to run the program in the background. * Added an option to set the log file name. * The option to hide the taskbar icon is now always active. * The application now displays the option to save the data. * Made the application run faster. What's New in Version 4.1.1: * Added an option to hide the taskbar icon. * The application can now be run in the background. * The option to display the log file is now active. * Fixed a bug that prevented the executable file from being copied correctly. * Made the application run faster. What's New in Version 4.1.0: * Added an option to hide the taskbar icon. * The application can now be run in the background. * The option to display the log file is now active. * Fixed a bug that prevented the executable file from being cop
