Overall, I'd have to say that Lightroom 5 has the potential to be the best application for my photography, as I haven't found any application that does what Lightroom does, and has the breadth that Lightroom has. This requires that you're willing to look after it - you need to learn what it is, what it can do for you, how to set it up, what it does best and least well, and, most importantly, what it does reliably - and be willing to dig deep in the settings to find how to make the most of it in your own workflow. Lightroom 5 is the most powerful application I've ever used for RAW conversion. It works exactly as you would expect, and you can even export your images and put them on a different computer for more editing. And although I've got serious doubts that it can be used as efficiently as Photoshop, Lightroom will let you do it. However, is such a drastic change that it's a 2.0 now. Newer versions will come out regularly - and in a year or so Adobe will probably release a CS6 of Lightroom. But in the meantime, there are a number of features that I'm not entirely fond of. David is, by general reputation, a pretty easy person to work with. But there are still a few feature requests I've not heard about yet, so don't imagine this review will be all roses. Those who will read this review will be the ones who are looking for what the latest features are, and what they are. I'm not a Lightroom user, and I don't know what Lightroom 5 will look like, but I can tell you how it compares to what I'm using.

The terms "filters" and "clipping path" are pretty hard to define, but in both cases, you're creating a black mask for your original image. By repeatedly highlighting your mask and using the Select menu to delete unwanted areas, you'll be able to erase, cut or "paint" your desired destination. Once that's done, you can add color to the mask using a hue+saturation adjustment layer, or you can add a color overlay layer, applying a color as transparent or solid, such as white or black. Finally, you can create a new layer from just the remaining areas, and add another clipping path of your choice. **Universal Oversized Tiling buttons / Movement controls / Panning and Scrolling.** Envato Tuts+ shares the same hierarchical browsing and navigation routes used by Photoshop's toolbox. A "Shift" button splits the workspace, which also works on a 3×3 grid. (The part-square Zoom tool also tightly holds a set of assets when you zoom in, and stretches them apart in the view once you zoom out.) Scrolling can either be done using left- or right-click drag, or by using the Pan tool. Dragging with a mouse scrollwheel or pinching with an Apple Trackpad works as well. There's no scroll wheel in iPhone mode, but you can hook up two-finger scroll events. A pull down menu at the right of the workspace lets you flip your view horizontally or vertically. So you don't have to pinch and pan/drag to crop a subject as much, and you can get a better perspective view of all your assets at once.
